

Connect with your customers and machines around the world

It is our mission to **connect machine builders with their customers**. Close cooperation between machine builders and machine owners will increase service efficiency and reduce service costs and machine downtime.

IXON offers you a proven and well-integrated IoT platform for all your remote access and after-sales service needs. It is a complete solution where the unique knowledge of the machine builder, the needs of the customer and machine data come together.

It lets you remotely manage your machines in a secure way, and expand your digital services step-by-step, thereby paving the way to a world where machines never stop.

IXON: The only IoT platform with integrated remote access

The machine builder of the future is a service provider. But it all starts with a secure physical connection to your customer's machines. Whether it's for remote access or for developing new services with actionable insights from machine data: without this connection, nothing is possible.

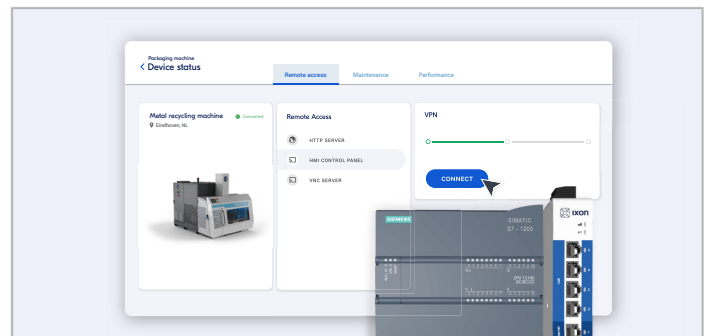

To support machine builders, IXON offers edge gateways as well as a cloud platform to collect, analyze and visualize data. The seamless integration between hardware and software enables you to achieve the highest standards of reliable and secure connectivity to your machines and your customers.

Seamless integration from machine to cloud

Control the entire chain from OT to the cloud with IXON's in-house developed edge gateways and Industrial IoT platform. Now you can meet the highest standards for machine connectivity in terms of security, reliability and usability.

- ✓ Integrated software & hardware solution from a single vendor
- ✓ Certified security & compliance
- ✓ Easy to use for both technical and non-technical users

Integrated remote access

IXON is the only IoT platform with an integrated remote access solution. This allows you to securely manage your machines, users and customers in one platform for both remote access and IoT.

- ✓ License-free use of high-speed VPN
- ✓ Unlimited number of users and advanced user management
- ✓ Supports all major PLC and HMI brands and industry protocols

Trusted by 2,500+ machine builders worldwide

The IXON platform meets all our needs and allows us to make customizations to adapt to customer requirements.

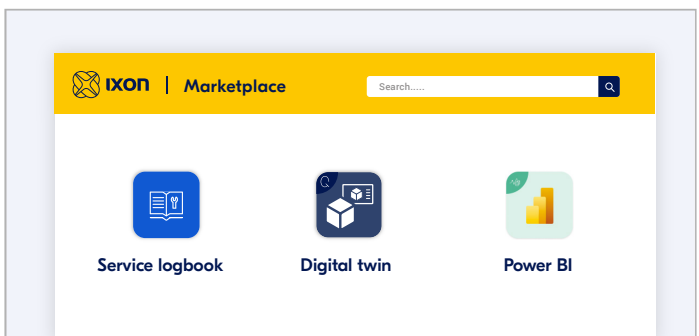

Oriol Miarnau, Automation Engineer at TMI

Start small. Learn fast.

IXON is a full-fledged industrial IoT platform for machine builders, with lots of functionality included by default. There's no need for big upfront investments and lengthy software development projects.

- ✓ Plug & Play cloud connectivity
- ✓ Component library for customizable dashboards
- ✓ Full-blown data logging, analysis and reporting capabilities

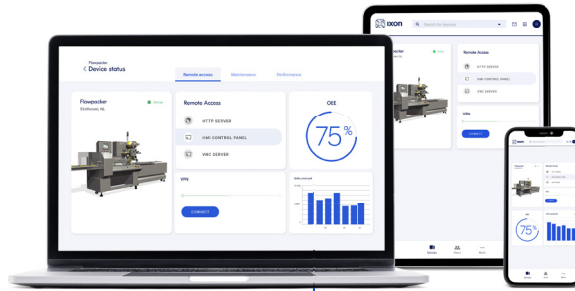

Open and expandable

IXON Cloud integrates with your existing IT applications and gives you the option to develop your own web applications on top of it. This ensures you have full freedom to customize your IoT environment to your needs.

- ✓ App engine & open APIs for custom developments
- ✓ White-labeled customer portal and smartphone app
- ✓ Apps marketplace supported by a large partner ecosystem

Connecting machine builders with their customers

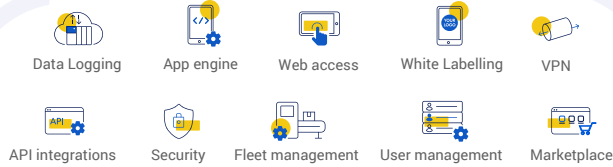

- ✓ Your specific IoT ideas
- ✓ Data-driven service level agreements

- ✓ Premium remote service
- ✓ Condition monitoring

IXON Cloud

- ✓ IoT architecture design
- ✓ Security compliance

- ✓ Training & implementation
- ✓ Business innovation
